

Recreation Site – Facility Master Planning
COLVILLE NATIONAL FOREST
PROPOSED 5-YEAR PROGRAM OF WORK

BRIEFING PAPER
December 2006

Background

The Colville National Forest is proposing future management of developed recreation sites through a process called “Recreation Site Facility Master Planning (RS-FMP).” Every national forest in the nation will also complete this process by 2007.

We want to provide healthy, safe, and well-maintained recreation opportunities that are important to local communities and visitors to our area. Through the RS-FMP process, the overall goals of our recreation site program are to:

- Focus resources on the most appropriate recreation opportunities to meet changing public desires and demands.
- Maintain or enhance visitor satisfaction with the sites and services provided.
- Meet quality health and safety standards at all developed recreation sites.
- Be financially sustainable.
- Be environmentally sound.
- Maintain community sustainability.

Many of our facilities were built 30-50 years ago and have reached the end of their useful life without significant deferred maintenance investment. Other facilities receive little or no use, and no longer serve the demand that existed in years past. The fundamental premise of the program of work is to create an inventory which is sustainable and flexible enough to be annually adapted to any changes in demand, available resources, and opportunities.

The RS-FMP process involves several steps: gathering inventory and financial data; identifying the forest recreation niche; evaluating each developed recreation site against established national criteria (including conformance with the forest niche, financial efficiency, and environmental and community sustainability); and ranking the recreation sites according to those criteria. Prior to initiating the Niche Workshop, the Colville National Forest District Rangers chose to send out a questionnaire to interested publics and agencies to assure understanding of how the public identifies with and utilizes the recreation opportunities, settings, and facilities of the Forest. Results of the questionnaire were summarized and utilized during the workshop. Using this analysis process, as well as professional judgment and assessment of our ability to meet current and future demand, the Forest has documented a proposed 5-Year Program of Work. We welcome your comments and suggestions on this proposal.

What's Happening on the Colville National Forest?

A Forest's recreation niche defines the best-suited recreation experiences or benefits that the forest can provide. It's what makes a forest special, and fosters quality recreation versus quantity, or trying to be all things to all people. It provides a good description of the uniquely specific recreation opportunities provided by the Forest within the context of the forest's ecological features, opportunities provided by others in the area, and the demands and desires of recreation visitors to the area now and into the future. The Colville National Forest niche is:

Rustic Recreation

“A dispersed recreation playground for our communities supported by rustic facilities scattered throughout the forest and connected by a network of scenic routes.”

This niche provides an umbrella context for all recreation programs on the Forest and helps us match up what is most wanted with what we can best provide, to create the most value for the public within our available resources.

Through this Recreation Sites Facility Master Planning, we are proposing a 5-year program of work to bring the Forest's recreation infrastructure into alignment with the forest recreation niche and the resources available to operate and maintain it to standard.

This proposed program of work is also important to address the backlog of needed maintenance at facilities that has been increasing over the years, creating health, safety, and visitor satisfaction concerns. Referred to as “deferred maintenance,” the amount of work needed in sites nationally is over \$148 billion. On the Colville National Forest, the backlog of deferred maintenance was over \$ 570,000 dollars as of October 2005. Along with that, less than one-quarter of all Forest Service developed recreation sites are now being operated to meet all quality standards.

More about the Recreation Site Facility Master Planning Analysis:

The Forest completed an evaluation of each developed recreation site using established national criteria, ranking their recreation sites according to those criteria, and making a recommendation for a Proposed 5-Year Program of Work using this information as well as professional judgment, and ability to meet current and future demand. The criteria include:

- Conformance to the forest niche and amount of recreation use (35%)
- Financial efficiency (35%)
- Environmental and community sustainability (30%).

We also considered if sites were under some type of operational or contractual agreement whose terms are longer than the 5-year period of the RS-FMP analysis (i.e. concessionaire-managed campground).

The Colville National Forest evaluated a total of 45 developed recreation sites. The following table summarizes the number of recreation sites evaluated by “site type.”

Colville National Forest Developed Recreation Site Summary

Recreation Site Type	Number of Sites Evaluated
Campground	27
Group Campground	1
Horse Camp	4
Picnic Area	1
Group Picnic Area	0
Trailhead	5
Boat/Swim/Fish	1
Interpretative Major	0
Interpretative Minor	6
Cabins/Lookouts	0 *
Information Site	0
Observation Site	0
Sno-Park	0
Snow Play	0
Organization Site	0
TOTAL	45

* Four lookouts were analyzed, however since these sites are not currently being managed as Recreation Sites, they were not included

The Proposed Actions and Program of Work for the Colville National Forest:

The Colville National Forest currently manages 45 developed recreation sites. The following is a summary of the proposed changes that will bring the Forest’s recreation infrastructure into alignment with the resources available to operate and maintain it to standard.

- Change the season of Full Service management to Memorial Day weekend and July 1 through Labor Day weekend, with reduced service as needed outside those dates, in order to reflect current management and operating seasons and better serve the public
- Continue existing partnerships and form new ones to assist in operation and maintenance of 27 sites
- Change 7 sites to Pack-it-in Pack-it-out to reflect current management emphasis respective of the Forest Niche.
- Remove 1 water system, 2 RV dump stations and 2 flush toilet systems to reflect current management emphasis respective of the Forest Niche.
- Reduce capacity (PAOTS) at 10 sites to reduce costs where low occupancy exists

The specific list of Proposed Management Actions by Site Name is attached. Please feel free to contact your local Ranger District or Forest with questions and comments about our process or proposed management actions. We would like to hear from you!

Results

The following results can be expected upon implementation of the proposed management actions described in the attachment. These particular results focus specifically on financial sustainability, reduced deferred maintenance, and meeting quality health and safety standards at all developed recreation sites.

Result	Baseline Condition	Program of Work Changed Condition	Percent Change
Appropriated Funds Available ¹	\$ 152,927	\$ 152,927	0%
Fee Receipts Available	\$ 29,972	\$ 29,056	-3%
Other Funds Available ²	\$ 808	\$ 720	-11%
Annual Operating Costs	\$ 201,472	\$ 115,748	--43%
Annual Maintenance Costs	\$ 155,954	\$ 65,940	-58%
Deferred Maintenance Costs	\$ 574,264	\$ 267,994	-53%
PAOT Days Managed to Standard ³	354,894	624,114	+76%
Annual O&M Costs/PAOT Day	\$ 0.52	\$ 0.29	-44%

¹Appropriated funds available are reflected using FY 2006 as the baseline funding year, with the assumption for this analysis that developed recreation funding will remain flat (subject to forest and regional priorities).

²Other Funds Available include funding from partnerships, grants, and other funding made available that are not appropriated funds or fee receipts.

³PAOT = People at One Time (or capacity of a site at any one time). PAOT Days equate to the number of days in a season where sites are managed to standard multiplied by total PAOT.

We will also continue to monitor visitor satisfaction with the sites and services provided, and consider how our developed recreation program contributes to local community stability. Some of the proposed actions will require full National Environmental Policy Act (NEPA) analysis, assuring environmentally sound decisions.

How closely the Forest adheres to the plan will depend upon available funding and resources, as well as the public's interest, and in many cases, involvement and partnership to enhance our recreation program.

Proposed Management Actions
Colville National Forest

The following is a summary of the proposed management actions. Recreation sites where multiple management options were identified, the management action code that results in the most significant changes was recorded. Additional details can be made available as requested.

Most management option code categories include sub-activities that identify more specific actions, however to simplify this summary of proposed management actions, the “primary” management action code is used. The primary management action codes are as follows:

<u>Management Action Code</u>	<u>Description</u>
A	Decommission
B	Closure
C	Change Season
D	Remove or Eliminate Cost Source or Service Season
E	Reduce Service Frequency Season
F	Increase/Improve Services
G	Construct a new Area
H	Change Operator or Work Force
I	Change Fees
J	Change Capacity (PAOTS)
K	Site Conversion
L	Replacement/Repair
NC	No Change
